

Serial No. 10/091,163

PATENT
Docket No. 54317-018700**AMENDMENTS TO THE CLAIMS**

Claim 1 (currently amended): A foldable case, the case being essentially rectangular having sides of unequal length for displaying an object, the case comprising:

first and second case sections joined by a flexible spine to form an integral body having a length of approximately 10 inches, breadth of approximately 5 inches in width of approximately .5 inches, at least one of the first and second case sections including a planar portion defined by the length and breadth and having a well for receiving an object such that the case sections can be foldably closed with the object inside;

the flexible spine having a width of approximately 1 inch and being connected to the planar portion of the case and permitting a first turning action to the first case section along an axis generally parallel to a first major side of the flexible spine;

the first and second case sections and spine being sized to accommodate a video cassette of a length of approximately 10 inch, a breadth of approximately 5 inch, and a width of approximately 1 inch;

a cut out portion in the planar portion of the first case section; and

an at least partially transparent window attached over the cut out portion on the planar portion of the first case section.

Claim 2 (currently amended): The foldable case for displaying an object according to claim 1, further including ~~an object~~ a toy object in the well that is displayed through the at least partially transparent window.

Claim 3 (original): The foldable case for displaying an object according to claim 1, wherein the spine is connected by a second major side to the second case section.

Claim 4 (original): The foldable case for displaying an object according to claim 1, wherein the first case section includes a cutout of a rigid material, the rigid material being positioned between the at least partially transparent window and the first case section.

Serial No. 10/091,163

PATENT
Docket No. 54317-018700

Claim 5 (original): The foldable case for displaying an object according to claim 1, further including a cut out portion in the second case section.

Claim 6 (original): The foldable case for displaying an object according to claim 5, further including an at least partially transparent window attached over the cut out portion of the second case section.

Claim 7 (original): The foldable case for displaying an object according to claim 3, wherein the flexible spine permits a second turning action to the second case section along an axis generally parallel to the second major side of the flexible spine.

Claim 8 (original): The foldable case for displaying an object according to claim 1, further including a cut out portion in the spine.

Claim 9 (currently amended): The ~~fold open display box~~ foldable case for displaying an object according to claim 8, further including an at least partially transparent window attached over the cut out portion of the spine.

Claim 10 (currently amended): The ~~fold open display box~~ foldable case for displaying an object according to claim 1, wherein the at least partially transparent window is made of flexible plastic.

Claim 11 (currently amended): The ~~fold open display box~~ foldable case for displaying an object according to claim 1, wherein the at least partially transparent window is a meshed screen.

Claim 12 (original): The fold open display box for displaying an object according to claim 1, wherein the first and the second case sections are made from a rigid thermoplastic material.

Claim 13 (currently amended): The fold open display box for displaying an object according to claim 2, wherein the window is cut out to match the profile of the object, the object being a toy the cut out being nonconforming with the rectangular panel.

Serial No. 10/091,163

PATENT
Docket No. 54317-018700

Claim 14 (currently amended): A fold open display box, the box being sized to receive a video and having a planar face and being approximately 10 inches in length and 1.5 inch in breadth, the box being for displaying a toy, the box comprising:

a first panel being about 10 inches in length and about 5 inches in width and having a first cavity, said first cavity having a cut out portion in a planar face of the panel;

a second panel having a second cavity, wherein at least one of the first and the second cavity is designed to receive a toy;

a toy placed in at least one of the first and second cavities that is displayed through the at least partially transparent window, the toy being of a pressable material;

an at least partially transparent window attached over the cut out portion of the first cavity; and

a wall connected by a first hinge to the first panel, the wall being about 1 inch in depth.

Claim 15 (cancelled)

Claim 16 (currently amended): The fold open display box for displaying a toy according to ~~claim 15~~ claim 14, wherein the toy is insertable or removable when either the first or the second panel is turned about an axis passing through the hinge.

Claim 17 (original): The fold open display box for displaying a toy according to claim 14, wherein the wall is connected by a second hinge to the second panel.

Claim 18 (original): The fold open display box for displaying a toy according to claim 14, wherein the first panel includes a cutout of a rigid material, the rigid material being positioned between the at least partially transparent window and the first panel.

Claim 19 (original): The fold open display box for displaying a toy according to claim 14, further including a cut out portion in the second cavity.

Claim 20 (original): The fold open display box for displaying a toy according to claim 19, further including an at least partially transparent window attached over the cut out portion of the second cavity.

Serial No. 10/091,163

PATENT
Docket No. 54317-018700

Claim 21 (original): The fold open display box for displaying a toy according to claim 17, wherein the wall is turned about an axis passing through the second hinge.

Claim 22 (currently amended): The fold open display box for displaying a toy according to claim 14, further including a cut out portion in the wall, the cut out portion conforming generally with the profile of the toy, such profile being different to the outer perimeter of the box.

Claim 23 (original): The fold open display box for displaying a toy according to claim 22, further including an at least partially transparent window attached over the cut out portion of the wall.

Claim 24 (original): The fold open display box for displaying a toy according to claim 14, wherein the at least partially transparent window is made of flexible plastic.

Claim 25 (cancelled)

Claim 26 (original): The fold open display box for displaying a toy according to claim 13, wherein the first panel and the second panel are made from a rigid thermoplastic material.

Claim 27 (currently amended): A fold open display box intended for containing a video cassette, the box comprising:

a first panel having a first cavity, said first cavity having a cut out portion, wherein the first panel has length of approximately 10 inches, breadth of approximately 5 inches and width of approximately .5 inch and defining a planar surface;

a second panel having a second cavity, wherein the second panel has length of approximately 10 inches, breadth of approximately 5 inches and width of approximately 1 inch, and defining a planar surface, wherein at least one of the first and the second cavity is designed to receive a toy;

an at least partially transparent window attached over the cut out portion of the first cavity;

an at least partially transparent window attached over the cut out portion of the second cavity; and

Serial No. 10/091,163

PATENT
Docket No. 54317-018700

a wall connected by a first hinge to the first panel, the wall has length of approximately 10 inches, and breadth of approximately 1.5 inches.

Claims 28 - 37 (cancelled)

Claim 38 (new): The foldable case for displaying a toy object according to claim 1 including a mesh material over the cut out portion.

Claim 39 (new): The fold open display box for displaying a toy according to claim 14 including a mesh material over the cut out portion.

Claim 40 (new): The fold open display box for displaying a toy according to claim 27 including a mesh material affixed in a permanent manner over at least one of the cut out portions.

Claim 41 (new): The fold open display box for displaying a toy according to claim 14 wherein the window is cut out to match the profile, such profile being different to the outer perimeter of the box.

Claim 42 (new): The fold open display box for displaying a toy according to claim 27 wherein the windows are cut out to match the profile of a toy, the toy being located in the box, such profile being different to the outer perimeter of the box.

Claim 43 (new): The fold open display box for displaying a toy according to claim 14 wherein the window is cut out to match the profile of the toy and wherein the toy includes a sound generator such that on depression of the toy a sound is generated.

Claim 44 (new): The foldable case for displaying a toy object according to claim 1 wherein the case includes a loudspeaker for generating sound related to a toy in the box.

Claim 45 (new): The fold open display box for displaying a toy according to claim 14 wherein the box includes a loudspeaker for generating sound related to a toy in the box.

Serial No. 10/091,163

PATENT
Docket No. 54317-018700

Claim 46 (new): The fold open display box for displaying a toy according to claim 27 wherein the case includes a loudspeaker for generating sound related to a toy in the box, the toy being located in the box.
